

WASTE CHALLENGE

Service Project For Students

PROBLEM

We all use more single-use disposable plastic and plastic packaging than we realise. Simply being aware of what we use is the first step to start reducing our waste and making a change.

Two Week Waste Challenge

Collect all the recyclable and non-recyclable plastic waste that you produce at home over a two-week period. Document (count and photograph) your accumulated plastic and work out ways you can reduce your plastic footprint.

Challenge your friends to see who has the biggest plastic footprint! Share your journey on social media and use #PlasticFootprintChallengeHK #plasticfreeproduce
